

Enabling Business Communications

Business documents play a central role in the communications between organizations, their clients and vendors. Invoices, statements, financial reports, purchase orders; every document sent to your customer is an opportunity for new business. To your vendor, it is an opportunity to reflect the professionalism of your business. With the right technology, you can create business documents and customer communications that help you develop, maintain and grow your business.

Customer communications impact every department of your organization. The right solution will allow you to communicate more effectively with your current customers as well as quickly implement strategies and processes to respond to future needs.

- **EASILY CREATE OR ENRICH**
- **VARIABLE CONTENT DOCUMENTS OF ANY TYPE;**
- **TRANSACTIONAL, TRANSPROMOTIONAL OR PROMOTIONAL**

Process Owners

Increase productivity and profitability by improving existing processes and reduce production delays...do more in less time.

Business Managers

Turn every communication into an opportunity to build loyalty and fuel sales by converting data into targeted relevant business communications. **Efficiently slash document-processing costs.**

Bottom-up design using host incoming data

Extract required information from data such as print streams, spool files, PDF files, database files, XML or other formats and easily map it onto a template document.

Add value to existing business documents

PlanetPress can import existing business documents created in any Windows application and interpret their content intelligently for repurposing and enrichment. Import other document formats to use as a template when drawing a new form from scratch using PlanetPress Design.

Optimize Production and Document distribution with automated workflows

Documents created with PlanetPress can be printed on any printer, sent via email, faxed and indexed for archiving and retrieval using your Electronic Document Management System such as S4i Express.

PLANETPRESS. SUITE

- Automate many of the processes associated with printing statements, invoices, purchase orders and other business correspondence by eliminating manual bursting, separating and distributing.
- Cut costs and increase workflow efficiencies.
- Improve corporate image with crisp looking laser printed documents.
- Eliminate the costs of pre-printed forms as well as the cumbersome process of loading, reloading and aligning these forms.

With no change to your host or business applications, you can benefit from the powerful features of PlanetPress.

Data can be reformatted in any number of ways. For example, include a Remittance Coupon on the bottom of an invoice with a data driven barcode, which increases workflow efficiencies while offering the ability to track payments on the backend. Invoices can contain graphics, barcodes, text or pages that are printed automatically depending upon the information contained in the data.

Source Z-fold blank pressure seal stock can be printed in color. Once printed, the Z-fold stock can be placed in a folder sealer to produce mailing pieces with no envelopes. With a folder/sealer machine, the bursting and envelop stuffing is eliminated, saving valuable man-days each month.

In addition you can:

- Automatically archive documents off for long-term storage and retrieval.
- Easily integrate with other workflow or Electronic Document Management systems.
- Create electronic signature images to merge with your documents for processing and distribution.
- With S4i Signature Capture solution, use mobile or hardwired devices to capture live signatures to merge with your PlanetPress documents, such as Bills of Ladings, for distribution and long term storage for later retrieval.
- Use distributed print to route printing tasks to local and remote printers on the network or distribute the print workload more efficiently.
- Implement a solution to replace noisy, dirty line printers using expensive pre-printed forms with PlanetPress and laser printers using cut-sheet paper.

PLANETPRESS. SUITE

Pick Ticket and Shipping

- Increase shipping document workflow efficiency.
- Supports Zebra Label Printers.
- Print Pick Ticket and Shipping Label together on the same printer/MFP (even on the same page, at the same time).
- Eliminate the need to manually match them up.

Reduce forms costs and automatically match labels to pick tickets!

Raw DATA - Before

Often times, companies print a pick ticket at the warehouse then have to re-enter the customer information into another system to generate a shipping label.

With PlanetPress, the same data originally used to print the invoice is now also sent to the warehouse (minus prices and with the scale and rotation changed) to print out a combined packing slip and shipping label, thus eliminating the error prone process of manually matching them up.

Personalized Letters

- Fully personalize your promotional and business correspondence with much more than just a name and address.
- Perform a mail merge without network congestion issues.
- Take advantage of mail merge features such as word wrapping and suppression of unwanted spaces.
- Print personalized letters or forms much faster.

Generate personalized internal documents such as employee benefit statements, performance review letters and correspondence by merging the form with personal data. When authorization or acceptance is required, integrate with signature capture software to drive a truly paperless business process.

Generate a personalized letter for your customer with a thank you message or special offer that is currently available on items related to their purchases. In addition to variable text, PlanetPress Design is capable of conditional images. This allows, for example, you to dynamically include the signature of the customer's specific sales rep. You can go even further with more advanced functions like dynamic graphing. With the addition of postal sorting software, the addresses can be pre-sorted for postal discounts and checked for accuracy.

Also, in traditional mail merge, if the printer jams or crashes there is no easy way to reprint from the middle of the job. PlanetPress can resend the job from any starting point.

Turn your invoices into full advertising vehicles with no changes to your host system or business applications:

- Include information on a related product to what was just purchased in order to drive additional revenue.
- Automatically included printed information that accompanies a purchased product or service (e.g. Specific growing instructions for tulips that the customer purchased with the invoice.).

With no change to the host system or business application, easily transform your invoices into advertising vehicles, making the most of the dollars spent on postage already. There is a goldmine of information within your existing invoice print stream that can be used to help you build a better relationship with your customers and sell more!

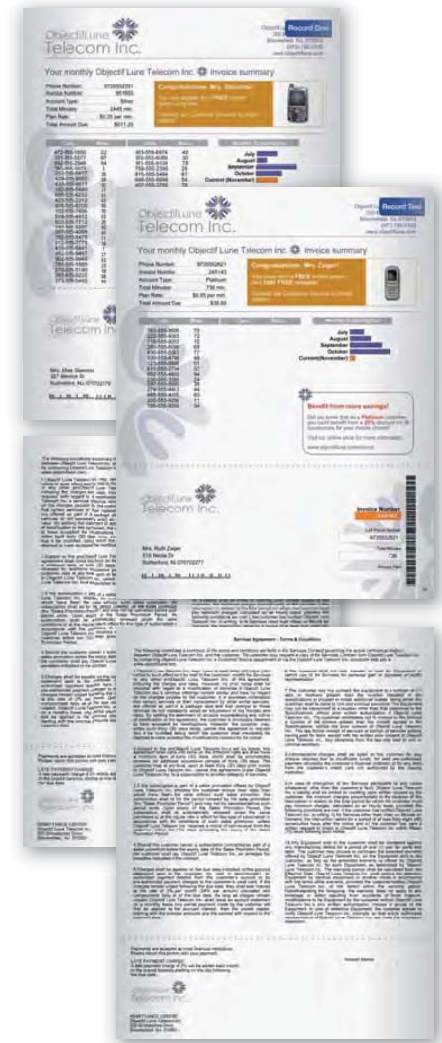

With minimal initial set up, targeted messages, graphics or pages can be printed based upon information found within the data:

- Add coupons or messages about related items or services contracts based upon line items in the invoice.
- Change Terms and Conditions on the reverse of the invoices based upon destination or customer type.
- Add a full page targeted color ad based on customer ordering patterns.

Personalization of documents has been proven time and again to increase response rates.

Greatly increase workflow efficiencies can also be realized by:

- Eliminating pre-printed forms that have to be printed on impact printers, burst and decollated, then distributed via interoffice or outside mail.
- Automatically routing data to the appropriate departments to print the accounting copy in accounting, the pick tickets and shipping labels, in the warehouse and the customer copy in the mail room or data center.
- Automatically generating electronic copies of those same documents and route electronically via email or fax, then index and archive for later retrieval.
- Emailing a copy of notice to the customer that their order is being processed and/or fax a confirmation...all automatically and simultaneously.

Check with Explanation of Benefits

- Reduce security concerns when printing checks on blank security check stock.
- Create an EOB formatted exactly the way you need it to be.
- Eliminate the need for expensive check stock with a pre-printed MICR line.
- Add targeted, personalized messages and information.
- No longer rely on noisy, high maintenance impact printers.

PlanetPress includes the MICR font installed as a TrueType font. The incrementing check number can be mapped to the check form from your data source, enabling the printing of unique check numbers, simulating the expensive pre-printed check numbered stock. Secure Laser check printing is truly one of the most cost-justifiable application solutions. Not only are the savings

realized on the paper costs, but more importantly, the savings on the storage, waste, obsolescence, and labor costs associated with handling and managing the preprinted checks in a paper processing environment is invaluable. For this and other reasons companies in all industries including Financial Institutions, Insurance, Manufacturing and Government organizations can benefit with a Laser Check Printing solution.

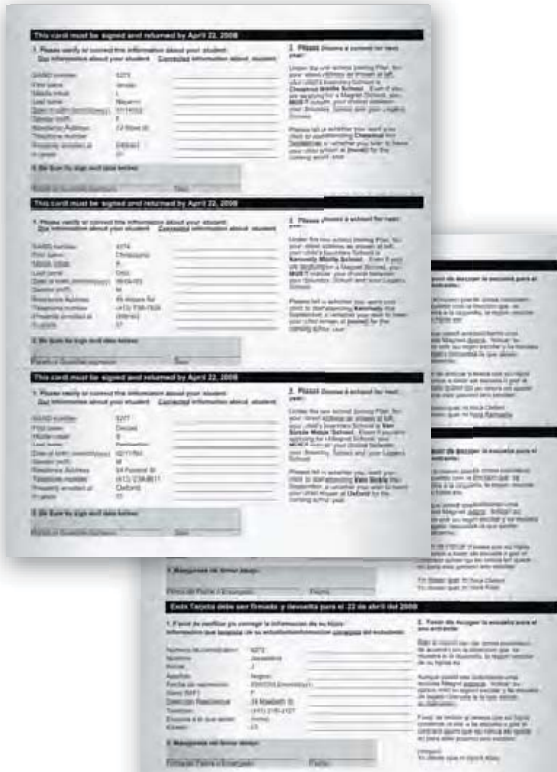

In addition, check printing security can be greatly enhanced:

- The newly designed check form layout is automatically merged with your check data, with all associated bank information, MICR font, and your business rules, then sent to a MICR-ized laser printer where it is printed on blank security check stock with MICR Toner.
- PlanetPress can provide an audit trail report of all checks printed. This allows the ability to reconcile against the accounting system.
- Blank Security Check Stock contains void pantographs, special watermarks and prismatic printing, all making it difficult to copy or create fraudulent checks.

Bilingual Registration Verification

- Map transactional data.
- Have variables on both sides.
- Set conditions for variables to appear/not appear.
- Support multiple languages.

Easily create multi-up perforated slips for printing. With no change to the host system, map your customer's data onto the form in the appropriate formatting.

Raw DATA - Before

Since the data is being pulled directly from your host, the most up-to-date information available is being printed on your form. Conditionally, pull in the appropriate data (such as the school in this example) based up city, zip code or other relevant variable. Print documents in an alternate language on the other side or print in a second language conditionally based up variable data.

N-up documents boost your efficiency!
They are simple to create and it is easy for the recipient to understand and quickly locate the relevant information.
