

S4i ImageXP captures document images electronically, and simplifies storage and retrieval. S4i ImageXP captures everything from scanned documents to electronic files.

S4i ImageXP integrates with S4i Express and other application software throughout the enterprise, and is compatible with an extensive array of hardware- scanners, diverse capture devices, content and document management systems, workflow applications and databases. S4i ImageXP uses Ascent Capture technology from Kofax. Ascent Capture is used by more than 50,000 IT shops globally.

Remote Capture

S4i ImageXP enables workers in remote offices to scan and validate documents directly into the central S4i ImageXP capture process for release into a back-end enterprise system. This important feature eliminates the cost of shipping and photocopying, and offers better security and document quality. Users can access content faster, which accelerates business processes.

Custom Modules

Tailor S4i ImageXP to support your precise business processes with any of dozens of plug-and-play custom modules. From powerful forms-processing modules that can extract information from even the most difficult documents, to postal mail scanning, to microfilm archiving for long-term records retention, These custom modules give users powerful, off-the-shelf alternatives.

Import Controller

Create front-end scripts to feed S4i ImageXP from enterprise applications such as financials, human resources, manufacturing, and management decision support.

Customizable User Interface

Modify the S4i ImageXP user interface via Visual Basic, Visual C++, or any language that supports COM.

Database Lookup Interface

Set up sophisticated database lookups without scripting.

Flexible Information Delivery

Deliver information into workflow and content management systems via release modules written in Visual Basic. Choose from our unrivaled library of release modules, or use our source code to write your own. S4i ImageXP facilitates the delivery of information into multiple systems at the same time.

Supports Color Scanning

S4i ImageXP has color image processing which improves image quality and OCR accuracy for color documents. It uses advanced algorithms developed by Kofax to handle full-color deskew, and state-of-the-art color-to-bitonal thresholding. S4i ImageXP can now automatically recognize color images, extract data from them and deliver them into your business systems.

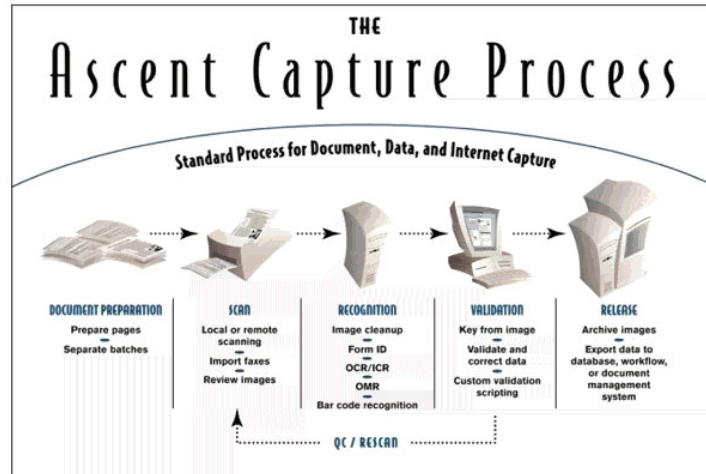

Easy To Use, Easy To Install

With S4i ImageXP, applications can be up and running in hours, rather than days or weeks of expensive installation and configuration. And when the job changes, Ascent Capture's test mode and point-and-click batch editing make setup a breeze.

Scalable To Grow With Your Enterprise

Scanning a few hundred pages a day? No problem. We have low-cost, stand-alone configurations that provide all the functionality you need. Scanning a million pages a day? Still not a problem. A networked installation of Ascent Capture can be expanded easily by adding more scanning, recognition, validation, or release stations. And with the Ascent Capture Internet Server you can expand even further by installing remote scanning and indexing stations anywhere around the world, all linked to your central site via the Internet or your corporate network. Or use the collection server to gather documents up that were imaged using a variety of remote scanning devices or presented electronically in a disparate environment for central processing, thereby, providing an automated and systematic solution to distributed workflow.

Ascent Capture from Kofax is a key component in S4i ImageXP

Additional Information

Advanced technology accurately recognizes handwriting (ICR), machine print (OCR), check marks (OMR), bar codes and checked boxes.

Native PDF Support. There is no additional expense to output "Image Only" PDF files, plus you can upgrade to enable "Image+Text" output.
